

IMPORTANT INFORMATION REGARDING PRIVATE PRESCRIPTIONS FOR MOUNJARO (TIRZEPATIDE) AND OTHER WEIGHT LOSS MEDICATIONS

We understand that some patients may choose to access weight management medications — such as **Mounjaro (Tirzepatide)** or **Wegovy (Semaglutide)** — privately for weight loss purposes.

Please note the following important information:

1. **City Square Medical Group does not initiate, monitor, or review** treatment with these medications when prescribed privately for weight loss.
2. **All responsibility** for monitoring, follow-up, and management of any side effects or complications lies entirely with your **private provider**.
3. This includes (but is not limited to):
 - Arranging and interpreting blood tests or other investigations
 - Monitoring for side effects or complications
 - Adjusting doses or making continuation decisions
 - Providing prescriptions and managing any emergencies related to the treatment

4. If you choose to use these medications privately, please ensure your private provider has appropriate arrangements in place for your monitoring and care.

5. Any requests for medical information or documentation to support private prescriptions will incur a fee.

As your NHS GP practice, we will continue to provide you with all other aspects of your routine NHS care. However, we cannot take over responsibility for any medication that has been initiated privately, nor for its ongoing monitoring.

If you experience any **urgent or life-threatening side effects**, please call **999** or attend your **nearest Emergency Department**.

Thank you for your understanding and cooperation.
